BUILD PACKAGE · VERSION 8 · NOVEMBER 13, 2026

XVI DNA Holo Desk

Both builds of the app are attached inside this PDF, along with the full source. This document shows what each build is, how to get it out of the PDF, and how to run it.

The artifact build running on the demo market: live chart, watchlist, practice account and the curved desk.

What is attached

FILE	WHAT IT IS	SIZE
`XVI_DNA_v8_standalone.html`	The whole app in one file. Open it in any browser. Uses live Coinbase prices when run through the launcher.	2.4 MB
`XVI_DNA_v8_claude_artifact.html`	The same app built as a Claude artifact page. This is the file published at the link below.	2.4 MB
`XVI_DNA_v8_source.zip`	Source files, build script, local launcher, icons and README. Rebuilds both files above.	3.0 MB

Published artifact: https://claude.ai/artifact/1LLnNLyxRGBH2ZUEEdiqiE
Private to you until you share it from the page's Share menu.

Getting the builds out of this PDF

The builds are stored as file attachments. A PDF cannot run an app, so you save the attachment first and then open it.

PDF VIEWER	WHERE THE ATTACHMENTS ARE
Adobe Acrobat / Reader	Paperclip icon in the left or right panel, or View → Show/Hide → Navigation Panes → Attachments. Select a file and choose Save.
Firefox	Open the sidebar (top left), then the paperclip tab. Click a file to download it.
Chrome / Edge	Open the sidebar or the menu at the top left and choose Attachments. Click a file to download it.
macOS Preview, iPhone Files	These do not show attachments. Open the PDF in one of the viewers above, or use the artifact link or the repository branch instead.

If your viewer blocks the files: some viewers refuse to save `.html` or `.zip` attachments for safety. The same files are in the repository on branch `claude/dreamy-davinci-82ab56`: `index.html`, `dist/xvi-dna-holo-desk.html` and `src/`.

Running the standalone build

1. Save `XVI_DNA_v8_source.zip` and unzip it.
2. Mac or Linux: run `./start.sh`. Windows: double-click `start.bat`. Any system: `python3 serve.py`.
3. The launcher opens the app at `http://localhost:8765` and relays Coinbase's public market data, so charts are live.

Opening `XVI_DNA_v8_standalone.html` directly also works. If Coinbase cannot be reached that way, the app switches to the demo market and shows a Retry live button.

Running the artifact build

Open the published link above. To publish your own copy, give `XVI_DNA_v8_claude_artifact.html` to Claude and ask for it to be published as an artifact. That file is a page fragment made for Claude, so it is not meant to be opened directly in a browser.

Rebuilding from source

From the unzipped folder: `cd src` then `python3 build.py`. This writes `index.html` (standalone) and `dist/xvi-dna-holo-desk.html` (artifact).

How the two builds differ

	STANDALONE	CLAUDE ARTIFACT
Market data	Live Coinbase public data. Demo market only if Coinbase cannot be reached.	Demo market by default, because an artifact page cannot call Coinbase itself. Live data through your Claude connectors once switched on.
AI teacher	Your own key: OpenAI, Claude API, Gemini, OpenRouter, Ollama or a custom server.	Claude built in, on your own Claude account, with no key. The key-based providers are listed too.
Orders	Practice account ($100) unless you add an MCP server with trading tools.	Practice account unless Claude connectors are on. Live orders are refused while demo prices show.
Progress	Saved in the browser.	Saved in the browser, with sync to your Claude account declared.
Dev mode export	Normal browser download.	Claude's download prompt.

Model lock

In **Connect AI**, the **Lock model** switch freezes the provider, model and server address.

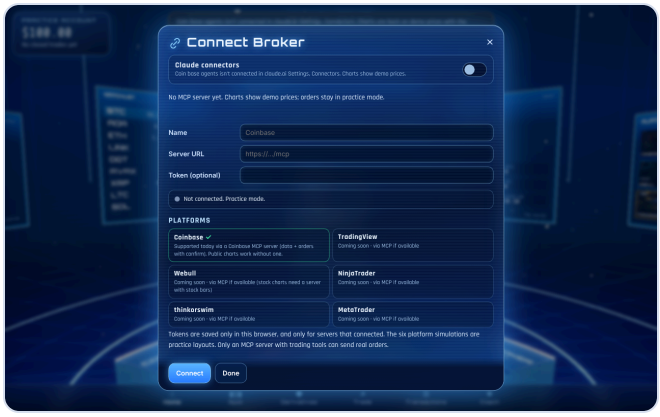

- Other provider cards are disabled.
- Any screen or script that tries to change the model is overridden.
- The lock survives a reload.
- Disconnect is refused until you unlock.

The same switch is in Settings → AI, data and trading.

Connect AI with the model locked.

Screens

Connect Broker. The Claude connectors switch turns on your own Coinbase and Webull connectors.

Standalone build through the launcher, on live Coinbase data.

Spot view at phone width.

Fixed in version 8

- The app stopped at "Needs live connection" whenever it ran inside Claude without connectors. It now always loads.
- Reset desk, reset dev changes, import, and allow or run AI script used the browser's confirm box, which never appears inside Claude. They are now in-page dialogs.
- Dev mode export did nothing inside Claude. It now saves through Claude's download prompt.
- Switching AI provider in Settings kept the previous provider's model name. It now clears.
- Service worker and icon requests are skipped inside Claude, where they only fail.

Not yet verified

- The Claude connectors switch, against real Coinbase and Webull connectors.
- The model picker and lock, against real Claude calls. They were tested with a stand-in.
- Progress sync to a Claude account.

XVI DNA is a learning tool, not financial advice. Real trades can lose money.
